good health care needs to be affordable and available for every single inhabitant of a country therefore you need proper infrastructure and a very thorough organization in my thesis paper i will explain the current situation in medical care in india and the problems connected with it i will list the reasons that led to this state and picture their influence on india after that i want to shortly summarize the problem india has with its healthcare system as a next step i will be explaining the german healthcare system with the german health insurances in addition i want to list some advantages and disadvantages the german insurance system has in the next paragraphs i will check whether the german system is adaptable to india to improve the indian health care situation for that two different projects in india will be explained to illustrate the attempt to improve the system the answer whether the german health care system would be possible in india will be stated in the last part of the paper the conclusion this paper looks at the way in which the pattern of disease is changing in developing countries and the implications this has for the way in which primary health care phc programs should be designed and managed in the absence of an accepted methodology for discussing health management issues it attempts to develop a conceptual framework suited to analyzing an environment of dynamic change it applies this framework first to the management of primary health care programs provided by governments and then to the role of the non government sector in primary care the paper draws broad clients if the general approach adopted seems useful the conceptual framework needs next to be applied to a series of specific country cases to test its validity and refine it and to adapt the general conclusions to local cultural administrative and political conditions understanding and modifying health behaviors plays an important part in healthcare the need to change behaviors applies across a range of health contexts from individual interventions to the clinically delivered management of chronic diseases and rehabilitation telehealth or virtual care technology offers many possible advantages here including cost efficiency scalability personalization and automated high volume data collection and analysis but success will depend on the effectiveness of the design implementation and deployment of it based methods this book which forms part of the global telehealth series includes papers presented at global telehealth 2019 gt2019 a national symposium on the topic of it based methods for health behaviours held in adelaide australia on 5 july 2019 the 10 papers selected for inclusion here comprise only full paper blind peer reviewed contributions received for the symposium and the subsequent call for further contributions topics range from the scientific theory of health behavior change through technological approaches to active ageing and the implementation of the 10 000 steps project to a discussion of digital infrastructure for the storing sharing of internet of things wearables and app based research study data the book will be of interest to all researchers managers and healthcare practitioners working to bring about positive changes in health behavior the research handbook for health care professionals is the essential guide to the entire research process for students and practitioners alike from conceiving an idea for a project to writing up the findings for publication the book offers an overview of each stage plus hints and tips recommendations for further reading and examples spanning a wide range of health professions the book comprises three sections getting started doing your research and writing up and dissemination and includes chapters on key topics such as formulating your research question writing the initial research protocol application for ethical approval research governance collecting your data research methods and preparing a poster for a conference my health companion a portable paper health organizer 2010 part one part two part three the world's two most populous countries china and india are undergoing dramatic demographic societal and economic transformations however the health status of residents of china and india still lags behind relative to other populations and the health gains in each country have been uneven across subpopulations although they have achieved substantial advances in life expectancy and disease prevention since the middle of the 20th century the chinese and indian health systems provide little protection against financial risk and patient satisfaction is a lower priority than it should be this paper compares the health systems of

china and india to determine what approaches to improving health in these two countries do and do not work in particular the authors compare the health systems in china and india along three dimensions policy levers intermediate outcomes and ultimate ends the authors conclude that both countries must 1 restructure health care financing to reduce the burden of out of pocket medical care costs on individual patients 2 increase access to care especially in rural areas 3 reduce dependence on fee for service contracts that promote overutilization of medical care 4 build capacity for addressing and monitoring emerging diseases and 5 match hospital capabilities with local needs access to and use of health services are concerns in poor countries if implemented correctly health insurance may help solve these concerns due to selection and omitted variable bias however it is difficult to determine whether joining an insurance scheme improves medical care seeking behaviors this paper uses representative data for the whole country of ghana and an instrumental variable approach to estimate the causal impact on healthcare use of participating in ghana s national health insurance scheme idiosyncratic variations in membership rules at the district level provide exogenous variation in enrollment the instrument is the existence of nonstandard verification methods to allow enrollment of children using the 2008 ghana demographic and health survey and a census of all district insurance offices this paper finds that insurance membership increases the probability of 1 seeking higher quality but no greater quantity of maternal services and 2 parents becoming more active users of child curative care instrumental variable estimates are larger than ordinary least squares ones indicating that compliers have much higher returns to being insured than the average participant results are robust to several validity checks this paper shows that the instrument is indeed idiosyncratic and proves that government officials did not establish less cumbersome membership rules in districts with worse initial indicators are advanced industrialized countries converging on a market response to reform their systems of social protection by comparing the health care reform experiences of britain germany and the united states in the 1990s susan giamo explores how countries pursue diverse policy responses and how such variations reflect distinctive institutions actors and reform politics in each country in britain the thatcher government s plan to inject a market into the state administered national health service resulted in a circumscribed experiment orchestrated from above in germany the kohl government sought to repair defects in the corporatist arrangement with doctors and insurers thus limiting the market experiment and designing it to enhance the solidarity of the national health insurance system in the united states private market actors foiled clinton s bid to expand the federal government s role in the private health care system through managed competition and national insurance but market reform continued albeit led by private employers and with government officials playing a reactive role actors and institutions surrounding the existing health care settlement in each country created particular reform politics that either militated against or fostered the deployment of competition the finding that major transformations are occurring in private as well as public systems of social protection suggests that studies of social policy change expand their focus beyond statutory welfare state programs the book will interest political scientists and policymakers concerned with welfare state reform in advanced industrial societies social scientists interested in the changing balance among state market and societal interests in governance and health policy researchers health policymakers and health care professionals susan giamo is an independent scholar she completed her ph d in political science at the university of wisconsin madison she also earned an msc in politics from the london school of economics and political science with the politics and government of western europe as the branch of study after completing her doctorate she was a postdoctoral fellow in the robert wood johnson foundation scholars in health policy research program university of california at berkeley and the robert bosch foundation scholars program in comparative public policy and comparative institutions american institute for contemporary german studies johns hopkins university she taught in the political science department at massachusetts institute of technology for five years during

that period she won the society for the advancement of socio economics founder s prize for adapting the welfare state the case of health care reform in britain germany and the united states a paper she coauthored with philip manow she has also worked for health maintenance organizations hmos and medical practices in the united states this book constitutes thoroughly refereed revised selected papers from the bpm 2012 joint workshop on process oriented information systems and knowledge representation in health care prohealth 2012 kr4hc 2012 held in tallinn estonia in september 2012 the 9 papers presented were carefully reviewed and selected from 19 submissions in addition the book contains 1 keynote paper and 2 invited contributions the papers are organized in topical sections named guidelines and summarization archetypes and cooperation and process mining and temporal analysis based on trisha greenhalgh s course on teaching evidence based health care this workbook can be used as a stand alone self learning book either for groups or individuals the different units covering areas such as decision analysis and diagnostic testing each contain a published paper with exercises for the user and critical appraisal checklists it will act as a complement to the best selling how to read a paper

access to and use of health services are concerns in poor countries if implemented correctly health insurance may help solve these concerns due to selection and omitted variable bias however it is difficult to determine whether joining an insurance scheme improves medical care seeking behaviors this paper uses representative data for the whole country of ghana and an instrumental variable approach to estimate the

causal impact on healthcare use of participating in ghana s national health insurance scheme idiosyncratic variations in membership rules at the district level provide exogenous variation in enrollment the instrument is the existence of nonstandard verification methods to allow enrollment of children using the 2008 ghana demographic and health survey and a census of all district insurance offices this paper finds that insurance membership increases the probability of 1 seeking higher quality but no greater quantity of maternal services and 2 parents becoming more active users of child curative care instrumental variable estimates are larger than ordinary least squares ones indicating that compliers have much higher returns to being insured than the average participant results are robust to several validity checks this paper shows that the instrument is indeed idiosyncratic and proves that government officials did not establish less cumbersome membership rules in districts with worse initial indicators
